I like being involved in the whole product: who it's for, how the business works, what to build and how it should feel to use. Smart contracts since 2017. Now building Raycash, confidential money for everyday life.

experience

Raycash Co-founder & CEO — 2025–now

Confidential money on Ethereum. Balances and transfers are encrypted with Zama's fully homomorphic encryption, so the contracts settle a payment without reading its amount.

- Own product decisions, technical direction, hiring and delivery for a small team building the contracts, a web app and a mobile app.
- Hands-on across the Solidity and FHEVM contracts and the Next.js and React Native apps. BDD-first, with CI gates that block bad releases.
- Open-sourced the tooling we kept needing: deployoor and confidential-primitives, audited by Burrasec.
- AI is part of how we write, review and test code. I build my own agent harnesses, orchestration and skills.

Zama Entrepreneur in Residence — 2025

Worked with the CEO and the protocol and cryptography leads to shape the products FHE could make possible. Explored confidential money: self-custody, encrypted stablecoin balances and compliance through selective disclosure. That work became Raycash.

Sandsoft and YOX Technical Lead · Riyadh — 2023–2024

Technical lead at Sandsoft, a mobile games publisher, and YOX, a marketplace founded in 2023.

Dappflow Co-founder & Director · London — 2020–2021

One of the earliest platforms for managing smart contracts. Blockchain architect on an Innovate UK grant project building a jobs board on decentralised identity.

Coincierge Co-founder & CPO · London — 2018–2020

Co-founded a digital securities platform and led its product.

earlier

Forge Design Chief Blockchain Officer — 2020

Evident Proof Blockchain engineer and advisor — 2018

Token Lounge Co-founder — 2018

CommerceBlock Smart contracts developer — 2017

Voncrank JavaScript developer — 2017

Intesa Sanpaolo, Slow Food UX consultant — 2016–2017

Suppershare CTO · Milan — 2014–2016

education

University of Gastronomic Sciences Pollenzo — 2012–2015

BSc Food Science and Technology

open source

offprompt — MIT

An MCP server that lets coding agents ask you for API keys without the value passing through the model.

deployoor — MIT

Deploy once, then use typed viem contract objects in every app, script and test.

confidential-primitives

Building blocks for confidential contracts on Zama's FHEVM. Audited by Burrasec.

experiments

pinkwhale — 2022–2023

NFT lending built only from Seaport orders, with no escrow or liquidation code of its own.

chain-double — 2022

Won the IPFS/Filecoin prize at ETHGlobal HackFS. L1 NFTs that mirror their L2 twin through IPFS CIDs.

skills

Contracts
Solidity, Zama FHEVM, ERC-7984, Foundry, Hardhat, viem

Apps
TypeScript, Next.js, React, React Native, Node.js

AI
Agent harnesses and orchestration, skills, MCP

Product
Product direction, UX, hiring, team leadership

Languages
Italian (native), English
